BASIC-ABSTRACT:

Cosmetic solar compositions comprise a mixture of four natural oils, one of which is oil from the seed of annatto (Bixa orellana L.).

Pref. the other three oils are: (a) maize germ oil, which is rich in unsaturated acids and vitamin E, (b) marigold oil, and (c) fractionated coconut oil, a conventional base for use in solar cosmetics. There may also be added vitamin E, a preservative, and a perfume. ADVANTAGE - The annatto oil contains Provitamin A, which is used in the tanning process by stimulating the production of melanine, has a thermoregulating action, is insect repellent and soothes bites, is a selective sunscreen, and it leaves the skin soft and supple.
